Under the health reform law (Affordable Care Act), pharmacy benefit plans must cover certain Preventive Care Medications at 100 percent - without charging a co-pay, co-insurance or deductible. These products include:

- U.S. Preventive Services Task Force A & B Recommendation medications
- Food and Drug Administration (FDA)-approved prescription and Over-The-Counter (OTC) birth control (contraceptives) for women

To comply with this law, OptumRx is offering this updated list of no-cost Preventive Care Medications.

You can use your OptumRx member ID card to get the products on this list for no cost if they are:

- Prescribed by a health care professional
- Age- and condition-appropriate
- Filled at a network pharmacy

These products are available at no cost to you on both standard and high-deductible or consumer-driven health plans. To find a network pharmacy, login to OptumRx.com, choose “Locate a Pharmacy” and enter your zip code - or call the number on your OptumRx member ID card. If you get these drugs or products from an out-of-network pharmacy, you will have to pay the full cost for them. Male forms of birth control are not currently considered Preventive Care Medications under the Affordable Care Act.

U.S. Preventive Services Task Force A & B Recommendation Medications and Supplements

A prescription is required to get these medications and supplements at no cost - even though most are available over-the-counter (OTC).

Tobacco Cessation Medications

If you need help to quit smoking or using tobacco products, these preventive medications are available at $0 cost-share.

To qualify, you need to:

- Be age 18 or older
- Get a prescription for these products from your doctor, even if the products are sold over-the-counter (OTC)
- Fill the prescription at a network pharmacy

Up to 180 days of treatment are covered at no cost each year. Maximum daily dose quantity limits apply.

<table>

</tr>
</tbody>
</table>

These three prescription medications are covered after members have tried:

1) One over-the-counter nicotine product and
2) Bupropion sustained-release (generic Zyban) separately

Breast Cancer Preventive Medications

For members who are at increased risk for breast cancer but have not had breast cancer, these preventive medications are available at $0 cost-share.

To qualify, a member must:

- Be age 35 or older
- Be at increased risk for the first occurrence of breast cancer – after risk assessment and counseling
- Obtain Prior Authorization

Most plans cover these medications at normal cost-share for the treatment of breast cancer, to prevent breast cancer recurrence and for other indications. They are available at $0 cost-share to prevent the first occurrence of breast cancer if a Prior Authorization is obtained. If a member qualifies, they can receive these drugs at $0 cost-share for up to five years, minus any time they have been taking them for prevention.

Pharmacy Benefit Preventive Care Medications Coverage

When will no cost Preventive Care Medications be available? Preventive Care Medications are available now. 4

What Preventive Care Medications are available at no cost? A list of Preventive Care Medications can be found on pages 1-3 of this document so you can discuss them with your doctor. You can also login to OptumRx.com or call the number on your OptumRx ID card to confirm the most current list of Preventive Care Medications for your plan.

Are all birth control products available at no cost to me? No, only the products on the list applicable to your plan will be no cost under the pharmacy benefit. 5 The health reform law allows plans to use reasonable medical management to decide which birth control products will be provided at no cost.

If you choose a product from this list, your cost at the pharmacy will be $0. If you choose a covered birth control product that is not on the list, a co-pay or co-insurance may be required. And this cost will apply to your deductible if you have one.

What if my doctor says I need birth control that is not on this Preventive Care Medication List? Our Preventive Care Medications List includes at least one form of birth control from FDA-approved methods typically available through your pharmacy benefit. If your doctor recommends pharmacy-dispensed birth control not on our list for medical reasons, OptumRx will cover that recommended drug or product at no cost to you through our exceptions process. Just call the number on your OptumRx ID card, and ask how to obtain coverage. Medical reasons may include side effects, whether the birth control is permanent or can be reversed, and whether you can use the product as required.

Some methods of birth control, such as IUDs and Implants, may be available through your medical benefit and not your pharmacy benefit.

If I’m at risk for preeclampsia during pregnancy, how can I get low-dose aspirin for no cost? Low-dose or baby aspirin (81 mg) is available at no cost to pregnant women at risk for preeclampsia. If you are pregnant and at risk for preeclampsia, talk to your doctor about whether low-dose aspirin can help. If so, your doctor can give you a prescription for low-dose aspirin which can be filled at no cost to you at a network retail pharmacy.

If I need to take preparation medications before a preventive colonoscopy, how can I get these for no cost? If you are scheduled for a preventive colonoscopy, ask your doctor for a prescription for one of the no cost preparation medications. You can fill this prescription at a retail network pharmacy at no cost to you.

What if my doctor prescribes a preparation medication for my preventive colonoscopy that is not on this list? You can ask your doctor for a prescription for one of the medications on this list that your doctor feels would work for you. For some medical reasons, your doctor may decide you need a medication that is not on this list to prepare for your preventive colonoscopy. If so, you can request the medication you need by calling the number on your health plan ID card, and asking how to obtain coverage at no cost. Medical reasons may include side effects, and whether you can use the product as required.

If you need a prescription medication to prepare for a colonoscopy that is not preventive, these medications may still be covered with a co-payment or co-insurance.

How can I get preventive medications to help me stop using tobacco for no cost? If you are age 18 or older and want to quit using tobacco products, talk to your doctor about medications that can help. If your doctor decides this therapy is right for you, they may prescribe a generic Over-the-Counter or prescription medication.

The tobacco cessation products on this list are available at no cost to you if they are:

- Prescribed by your doctor
- Filled at a network pharmacy
- Meet use and quantity guidelines

If I’m at risk for breast cancer but have not had it, how can I get preventive drugs for $0 cost-share? If you are a member age 35 or older, talk to your doctor about your risk of getting breast cancer if you have not had it.

If your doctor decides this treatment is appropriate for you, your doctor may offer to prescribe risk-reducing medications, such as raloxifene or tamoxifen. 6

You doctor can submit a Prior Authorization request to get these approved for you at $0 cost-share if you meet coverage criteria.

How many Preventive Care Medications can I get? Some products have quantity limits based on FDA approved dosing or product packaging. Coverage is limited to up to a 30 day supply at retail pharmacies or up to a 90 day supply from home delivery.

Will this drug list change? Drug lists can and do change, so it’s always good to check. You can learn the cost of all products and no cost options by:

- Logging in to OptumRx.com, or
- Calling the number on the back of your OptumRx ID card.

What if I have a high-deductible or consumer-driven health (CDH) plan? The same no cost options on the list applicable to your plan will be available to you. If you fill a prescription for covered birth control products that are not on your plan’s no cost drug list, you will need to pay the full cost, until your deductible is reached.
Are the no cost Preventive Care Medications available at both retail and home delivery pharmacies?
Preventive Care Medications are available at network retail pharmacies. Most are also available at the OptumRx® Home Delivery Pharmacy for plans with a home delivery benefit.

The OptumRx Home Delivery Pharmacy can mail a 3-month supply of your medication right to you with no cost for standard shipping. That means you can order four times a year instead of making 12 trips to pick up your medication. To start using home delivery, just call the number on your OptumRx ID card.

What if the health care reform law requirements for Preventive Care Medication coverage change?
If the law requiring plans to provide Preventive Care Medications at no cost changes, information on how your costs may be impacted will be available to you by:
• Logging in to OptumRx.com, or
• Calling the number on your OptumRx ID card.

Is my plan required to cover contraceptives?
Some plans may not have coverage for contraceptives if your employer qualifies for a religious exemption. Also, some organizations (Eligible Organizations) can choose not to cover contraceptives for religious reasons; OptumRx may provide or arrange for contraceptive coverage for members of Eligible Organizations as required by the health reform law. In either event, you will still have coverage without cost-share of the U.S. Preventive Services Task Force A & B Recommendation medications listed on the Preventive Care Medications list (such as aspirin and Vitamin D).

1. Please note this list is subject to change.
2. Always refer to your benefit plan materials to determine your coverage for medications and cost-share. Some medications may not be covered under your specific benefit. Where differences are noted, the benefit plan documents will govern.
3. All branded medications are trademarks or registered trademarks of their respective owners.
4. The cost for U.S. Preventive Services Task Force A & B Recommendation medications and OTC contraceptives on this list could be reimbursed back to Feb. 20, 2013 when the U.S. Dept. of Labor FAQ guidance was issued. However, they became available at network retail pharmacies at $0 cost-share on November 1, 2013.
5. When informed, an issuer must accommodate any member when one of the zero cost contraceptives may be medically inappropriate as determined by the member’s health care provider and waive the otherwise applicable cost-sharing for a contraceptive not currently covered at zero cost.
6. If your pharmacy benefit plan is grandfathered under the ACA, these drugs may be covered at the normal cost-share.
